## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 7-17, and 61-70, drawn to a method of treating or reducing neoplasia, classified in class 424, subclass 130.1. Upon election of Group I, Applicants are additionally required to elect a single antibody combination and its corresponding cell line identified by an ATCC number, as indicated above as they apply to group(s). The recited antibodies have different structures one from other and the search for the different combinations would be unduly burdensome. This requirement is not to be construed as a requirement for an election of species, since each of the antibodies recited is not a member of a single genus of invention, but constitutes an independent and patentably distinct invention.
  - II. Claims 38-49, drawn to a pharmaceutical composition, classified in class 530, subclass 387.1. Upon election of Group II, Applicants are additionally required to elect a single antibody combination, as indicated above as they apply to group(s). The recited antibodies have different structures one from other and the search for the different combinations would be unduly burdensome. This requirement is not to be construed as a requirement for an election of species, since each of the antibodies

recited is not a member of a single genus of invention, but constitutes an independent and patentably distinct invention.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process of treating neoplasia can be accomplished using an antagonist to the LT- $\beta$ -R, such as organic molecules or through peptide fragments that interact with the receptor.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
